

optional button signal output

connect to BC250 power button
solder pads to route signal from an
adapter button

power LED output

output is limited to **15mA*** via onboard resistor —
sufficient for most backlit buttons (5–12V versions).
to connect a high-power LED, RGB controller, or other
load — short solder jumper **J1** to bypass the resistor.
⚠ CAUTION: maximum continuous load with J1 shorted
must not exceed **250mA**.

* v.1.1–1.2 — 12v, 15mA output
v.1.3+ — 5v, 15mA output
